

RAYPACK® STUDIO

Innovative & unique: efficient realization of App Layering projects

RayPack Studio's new component PackLayering provides pleasant answers and solutions when it comes to the cumbersome topic of application layering.

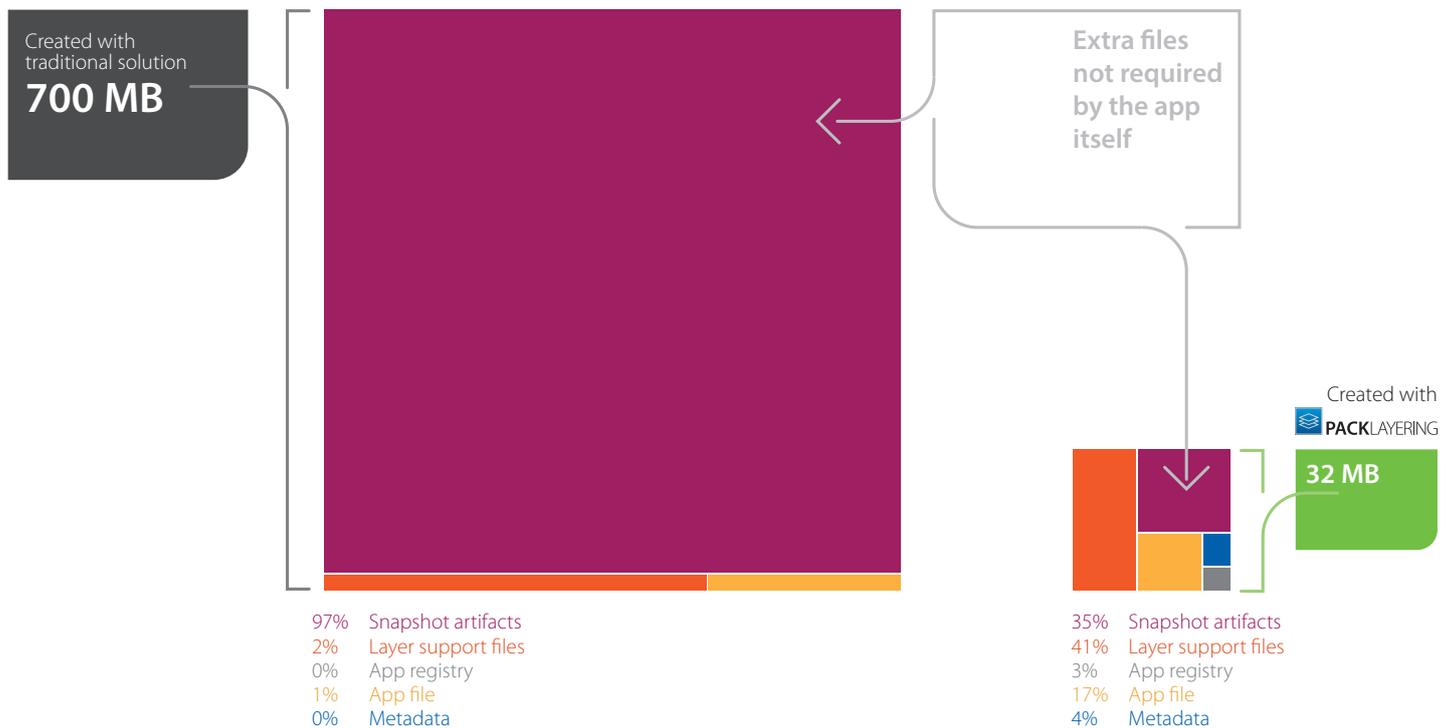

With the new version, application layers can not only be created, but also converted, edited, and saved. The innovative technology provides high flexibility and enormous time savings. RayPack Studio closes the functional gaps that arise with app layers and VDI using Citrix App Layering technology once and for all.

Typical challenges are large and unnecessary amounts of data, which lead to performance losses, conspicuously large network and storage capacities, but also to conflicts between the individual application layers.

Different target formats can be created with only one RayPack Studio project. Single Source of Truth – classic, modern or VDI.

Reduce data volume by 95% and optimize data quality with PackLayering

All benefits at a glance

- Easy conversion of existing MSI-based installations to the new Citrix AppLayering format *.LAYPKG
- Efficient creation and easy editing and storage of project files without excess of unnecessary resources
- Enormous reduction of data volumes without losses compared to conventional providers
- First and only solution provider for Citrix App Layering projects
- Know-how since 1999 in the software packaging and virtualization industry
