# Optimize your software portfolio & save unnecessary IT costs

Maximize your software investment & plan for the future

Despite centralized software procurement and deployment, many companies are paying too much money to operate and license their software. According to Gartner, total enterprise software spending in 2022 will be $670 billion and rising.

To ensure that IT costs and the associated effort continue to be kept as low as possible, companies must have visibility over the installations and use of **on-premises**, **SaaS**, **PaaS** & **IaaS applications**.

As a result, strategic decisions can be made, costs can be saved, and portfolio optimization can be performed.

Corporate software spending over the years (in Billion $)

Reduce software sprawl while maintaining business functionality

To optimize your software portfolio, meaningful and high-quality inventory data is necessary. This raw data is subsequently normalized and enriched with important market figures by one of the leading **technology catalogs**.

This includes not only showing version variety, business function, End-of-Life & End-of-Support information, and license types, but also looking at software alternatives with economic aspects in mind.

The **Unified Data Platform** provides the current state of your IT landscape in meaningful dashboards for more in-depth analysis.
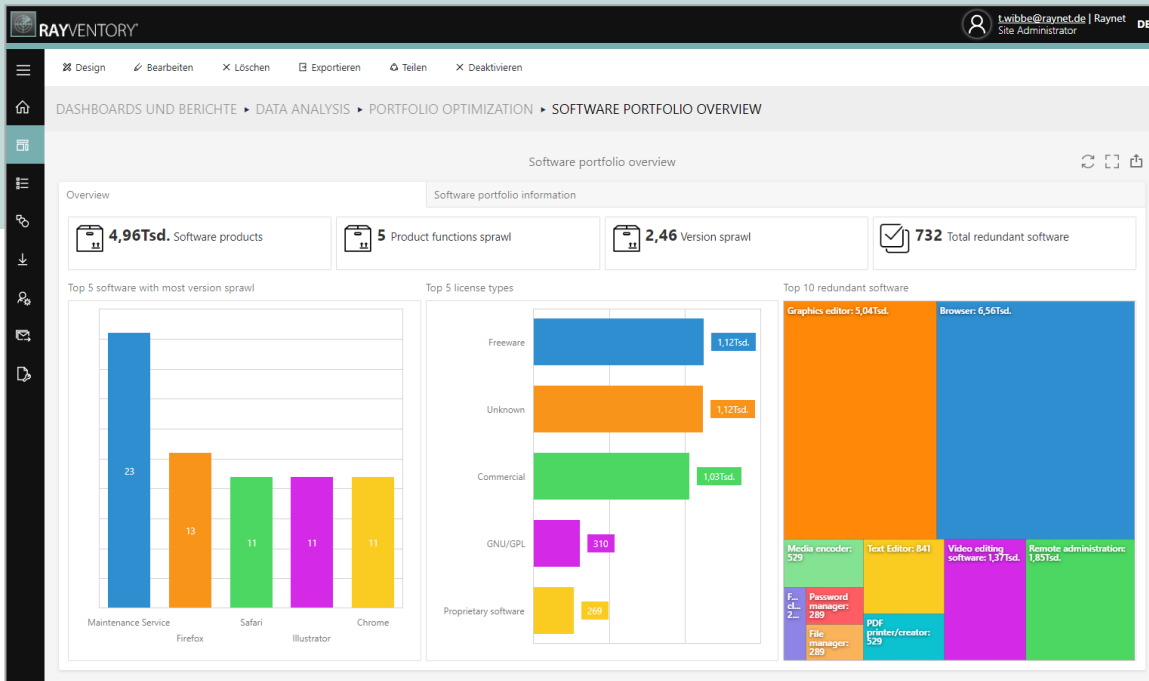

Your benefits

- Save ⌀ 43% on licensing, maintenance & support costs by consolidating functionality & version diversity
- Improve your IT security by removing unused & outdated applications with vulnerabilities
- Gain complete visibility of your software portfolio and set the foundation for further IT initiatives: SAM, ITAM & ITSM
- Increase productivity & efficiency in the core business through sustainable optimization of the software portfolio

Intelligent portfolio optimization in just three steps

1. Data Import

With its flexible inventory methods (agent-based & agentless), an integrated ETL technology, the Unified Data Platform combines different structured data from different sources in one central platform.

2. Software Recognition

Software recognition involves the assignment of existing raw data to applications. The Raynet technology catalog not only identifies vulnerabilities and risks, but also potential for optimization.

3. Software Rationalization

Meaningful dashboards and reports provide you with concrete recommendations for action to clean up your software landscape. Both your software strategy and economic aspects are considered.

Why Raynet?

Because we offer a quick and free opportunity to see all your Oracle Java installations in a central dashboard, giving you immediate transparency.

As a global software vendor with market-leading solutions and complementary managed services, we make successful end-to-end management of IT projects and operations possible.

Following the mission **Discover to Manage**, our vision is that all companies worldwide achieve transparency and security as well as optimization of their IT investments by using our technologies.
