

// Unified Endpoint Management

Automate the management of traditional & modern endpoints

Discover to Manage

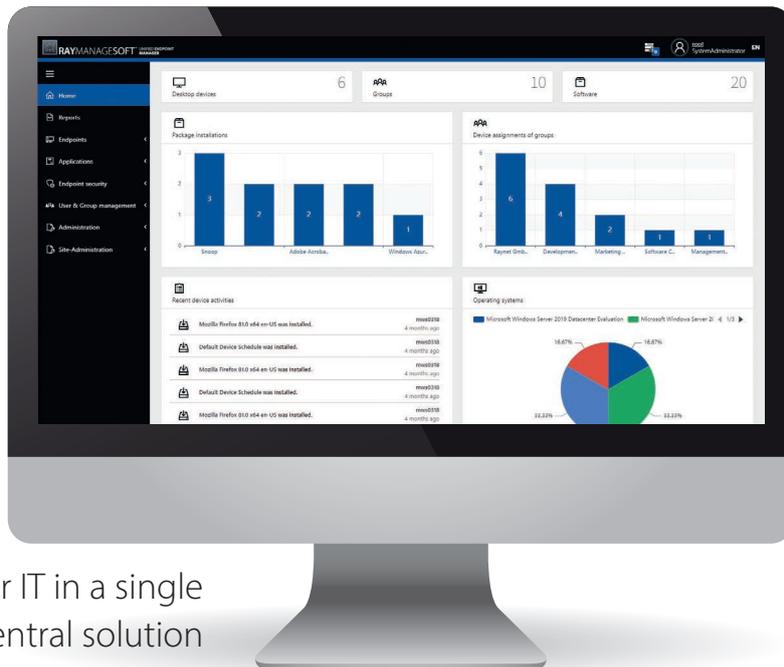

Unified Endpoint Management

The increasing use of mobile devices, the possibility of Bring Your Own Device, the provision of remote workstations, and the adoption of cloud infrastructures create a growing number of serious challenges for enterprises across industries.

With RayManageSoft Unified Endpoint Manager (RMS UEM) we introduce you to a high-performance technology for the management of all endpoints. The progressive UEM solution enables enterprises to supply all sorts of endpoints with an operating system, software applications and the newest security updates – independent of device type and location.

The intuitive user interface simplifies IT administration and allows holistic management of modern devices such as smartphones or tablets as well as traditional devices such as desktop PCs, laptops, or servers.

IT administrators must address the increasing complexity and non-transparency of their infrastructure with limited resources and provide an IT environment in which staff members can work without technical difficulties.

Manage your IT in a single central solution

Your benefits at a glance

Gapless overview of all endpoints in the enterprise

No interference of the everyday work of the end users by IT tasks

Transparent dashboards and reports for the facilitation of decision making

Central user interface with all controls and information

Proactive and continuous IT security for all endpoints

Reduction of time and cost by automation of routine tasks

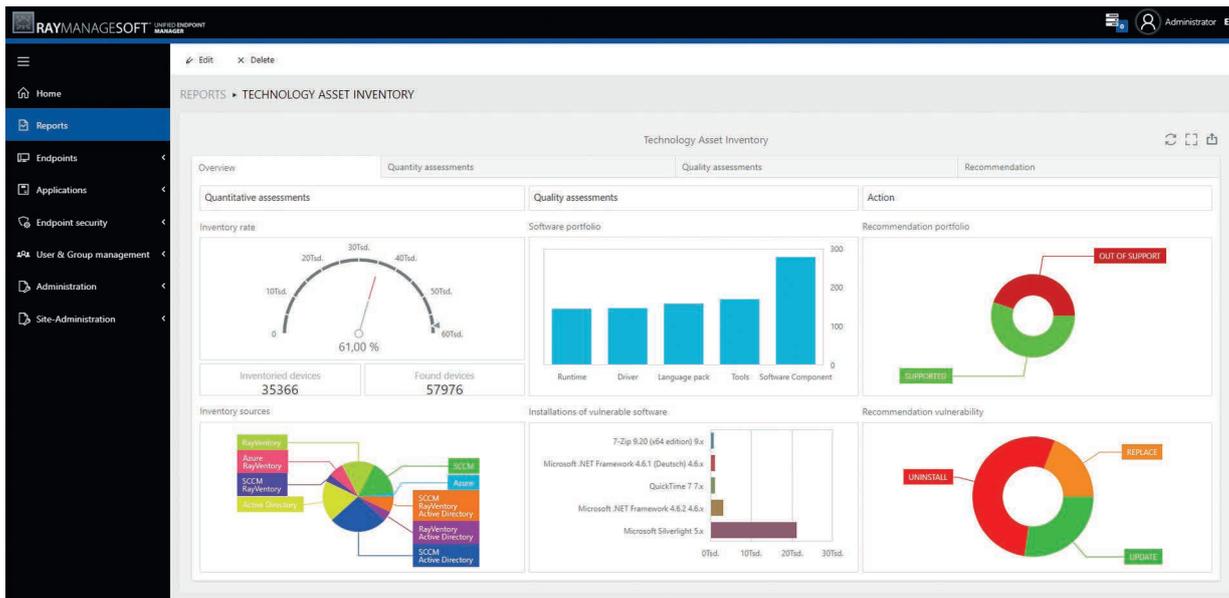

The intelligent method to manage any type of endpoint

The central user interface offers enterprises a technological advanced platform for governance and holistic management of both modern endpoints such as smartphones or tablets as well as traditional endpoints like desktop PCs, laptops, or servers.

This includes, among other functions, the deployment of software applications and operating systems for different endpoints of the enterprise, which can be installed with a single click in real time. Information about vulnerabilities is provided automatically which are then eliminated by the intelligent Update Management.

Discover to manage

Detailed data on your IT environment provides holistic transparency and facilitate the continuous optimization of the hardware and software portfolio. To be able to make quick and strategic decisions, IT administrators are given conclusive reports with reliable data that is transparently and clearly visualized.

Global management

The multitude of varying endpoints in a peripheral infrastructure is managed from a central position.

Complete transparency

Intelligent dashboards and reports guarantee a holistic overview of all relevant data of the IT infrastructure.

Limitless security

With the update and the vulnerability management every security breach is identified and eliminated.

Huge savings of cost and time

Simplified, clarified, and automated processes facilitate the management of many routine jobs with a few simple steps.

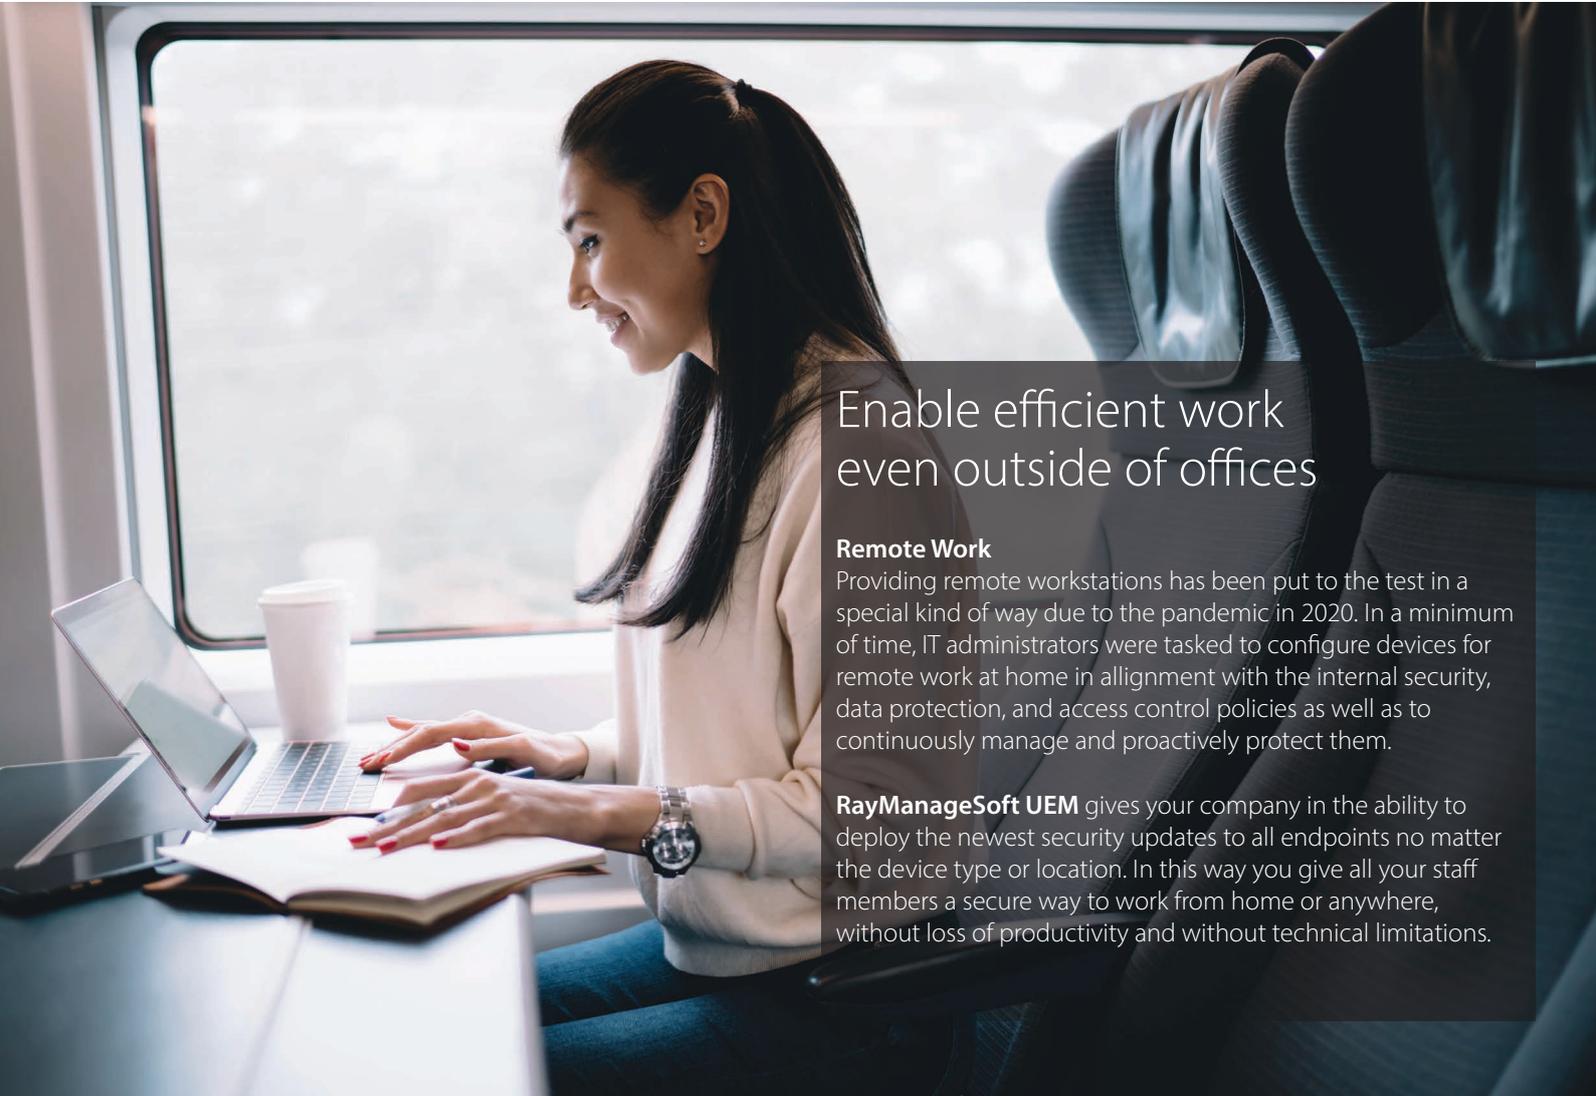

Securely integrate private devices into your IT infrastructure

Bring Your Own Device (BYOD)

As part of the digital transformation private smartphones, tablets and laptops have become constant companions in everyday work. To allow the use of private devices (BYOD) does not only cater to the personal preferences and satisfaction of employees but also reduces the cost of procurement of client hardware. However, managing these devices and operating systems, some of which are decentralized, requires a considerable amount of extra work for IT in addition to its daily tasks.

RayManageSoft UEM enables your enterprise to manage all these additional devices on a single platform. This allows you to configure these devices and ensure the protected access on sensible business data without taking any risky detours with the data transfer. Professional and private end user environments are separated in alliance with all security standards.

Enable efficient work even outside of offices

Remote Work

Providing remote workstations has been put to the test in a special kind of way due to the pandemic in 2020. In a minimum of time, IT administrators were tasked to configure devices for remote work at home in alignment with the internal security, data protection, and access control policies as well as to continuously manage and proactively protect them.

RayManageSoft UEM gives your company in the ability to deploy the newest security updates to all endpoints no matter the device type or location. In this way you give all your staff members a secure way to work from home or anywhere, without loss of productivity and without technical limitations.

Protect your enterprise and your data from cyber attacks

Vulnerability Management

The cumulating variety in software applications and especially those that reach end of life or end of support status often result in security vulnerabilities that threaten enterprises and see them prone to attacks from outside. IT departments are tasked to secure the enterprise, users, and all data against unauthorized access at all times.

The intelligent vulnerability management in **RayManageSoft UEM** provides you with daily actualized reports on vulnerabilities and prioritizes these based on their degree of severity. This enables IT administrators in charge to act immediately and eliminate risks ad hoc.

Unburden your IT and solve problems before they arise

Update Management

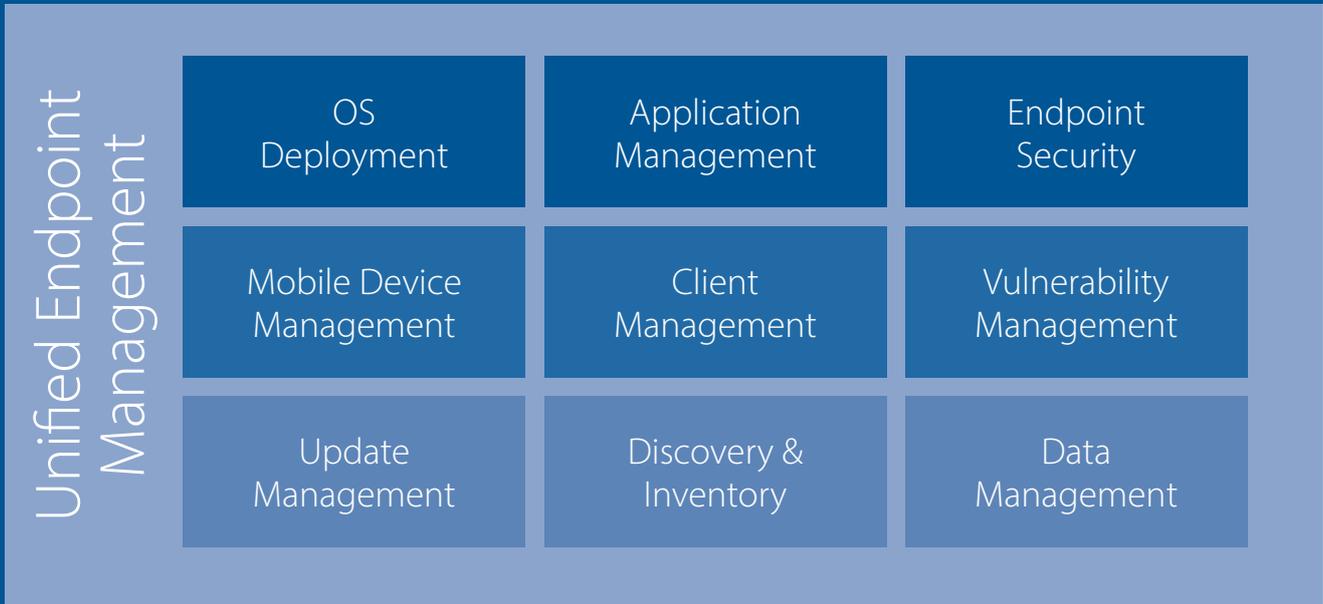

The continuously growing number of software applications and their decreasing update intervals are leading to growing administrative challenges for companies in maintaining their entire asset portfolio. However, the applications of all users must also be up to date in order to prevent security risks.

Achieve full transparency and control over software updates and security patches with the innovative update management of **RayManageSoft UEM**. By managing all endpoints in a central user interface, you see to gapless security for operating systems, software, and hardware. The integrated Package Store lists a wide range of third-party patches which we provide packed and ready to deploy for individual system environments.

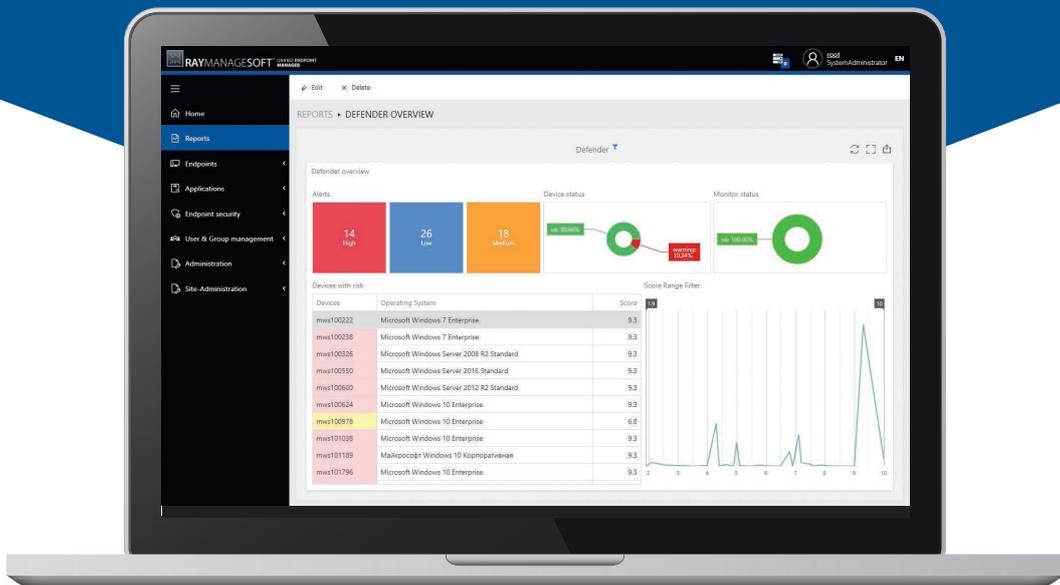

Core functions of the unified endpoint management

Forms of provision

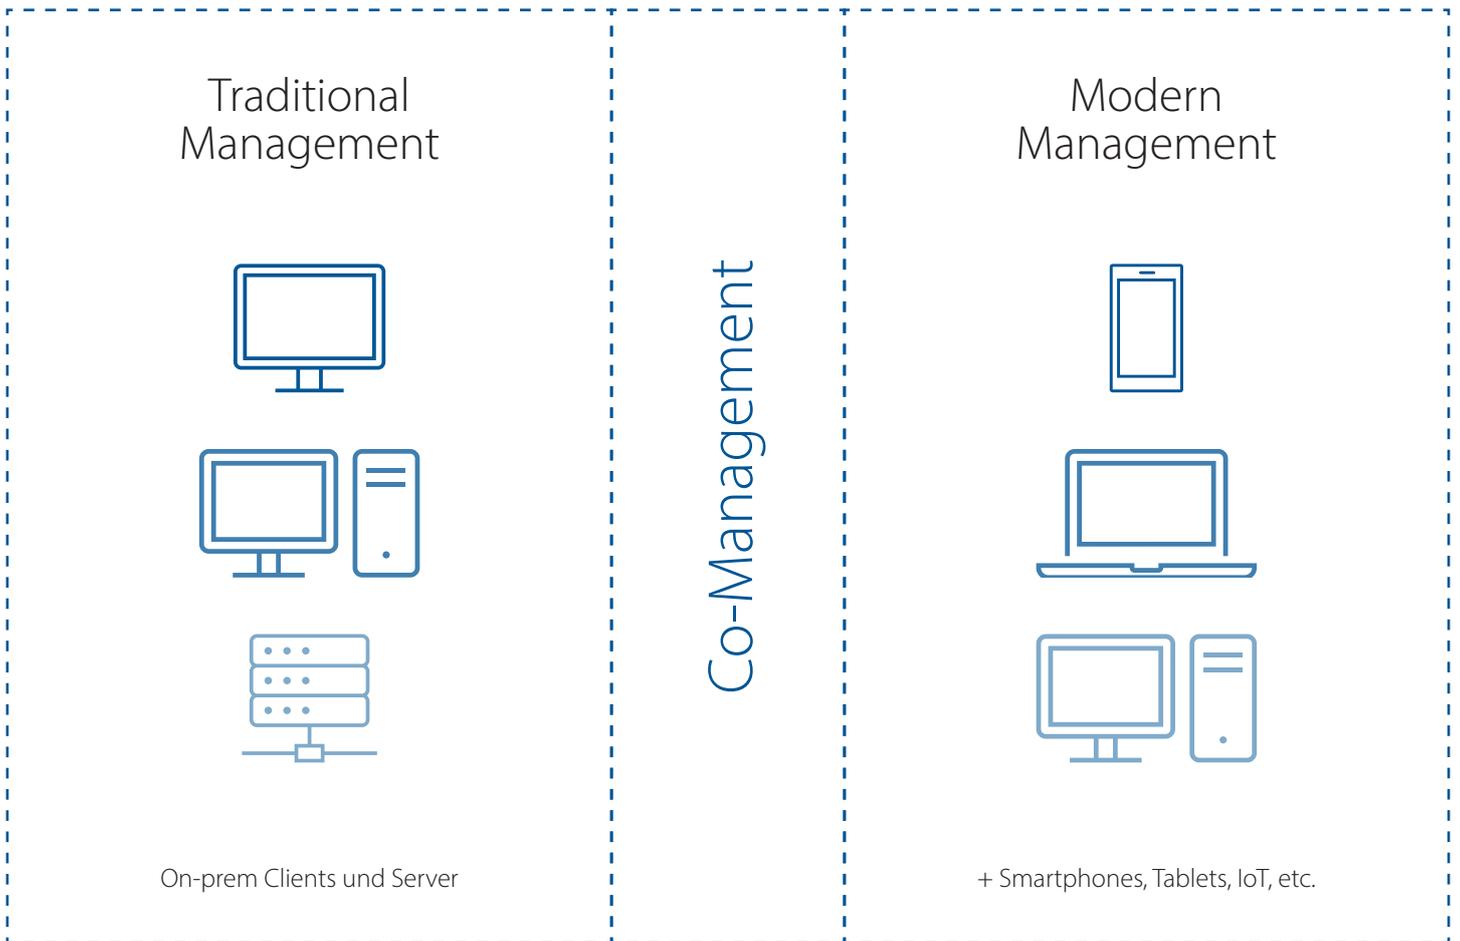

More power for your entire IT infrastructure

The co-management concept combines the traditional world of software management on premise and the modern world of cloud-based management. With this companies profit from a unique and high-performance solution across all types of endpoints.

The existing functions of classic client management are enhanced by modern and new functions that reduce overhead and costs and save your company valuable time.

Your benefits with the co-management concept

Central monitoring

With the help of informative, standardized reports, you always have your eye on your entire IT environment and the existing endpoint.

Comprehensive data management

Combine and manage all relevant data about users, software, and devices in a single central user interface.

Efficient IT provisioning

Benefit from intuitive and progressive processes to faster deploy operating systems and applications to the endpoints.

Individual governance

Plan your tasks and achieve higher performance without compromising the productivity of your users.

Why Raynet

As a global software vendor with market-leading solutions and complementary managed services, we make successful end-to-end management of IT projects and operations possible.

Following the mission **“Discover to Manage”**, our vision is that all companies worldwide achieve transparency and security as well as optimization of their IT investments by using our technologies..
