RAYMOBILE®

Intuitive Management Solution for Mobile Devices

RayMobile manages Apple iOS-, Android and Windows Devices with an intuitive management solution

Companies increasingly reach their limits when it comes to the management of Apple iOS, Google Android, Windows tablets and smartphones.

RayMobile provides a comprehensive management solution for central management and configuration of the latest devices no matter what the smartphone operating system is. The configuration and management is made by our intuitive management console which enables the management of all devices from any computer at any time. RayMobile offers the possibility of a smooth inventory of mobile devices as well as from the installed applications.

RayMobile allows a central installation of individual company applications on smartphones. New apps can be easily installed on all devices in real time. Within a short period of time, company applications can be installed or blocked on devices via white- and blacklisting. RayMobile provides the security of data to a large extent.

Benefits

- Security and control are achieved through isolation of corporate apps and data on mobile devices.
- Granular enforcement of app, data, and device policies
- Easy handling

Mobile Device Management

- Comprehensive device policies & privacy controls
- Remote device configuration & profile management
- Real-time email Management
- Device jailbreak & root detection

Mobile App Management

- Real-time app installation
- Enterprise app Store
- Black- & Whitelisting of Apps
- Ability make apps invisible

Mobile Content Management

- Share Content to your mobile devices
- Provision of documents by your company own servers

To avoid data loss RayMobile is so far-reaching that all data can be re-installed on any device after a theft or loss.

Moreover, RayMobile permits easy removal of company data after the loss of a device. All critical data of a company is protected by a secure password on the mobile device which is based on the company policies.

To protect company critical data against unauthorized access, it is important that the data traffic between the company and the devices is protected as well as the data on the smartphones

In the course of time

smartphones and tablets have developed into constant companions of employees in the company. Based on the motto 'Bring Your Own Device' employees use their

smartphones and tablets to strengthen their job roles within the company. Security of data presents companies a major challenge. With RayMobile and its intuitive management console, it is very easy to manage all devices as well as stored data, for example smartphones are configured by the IT department to receive business e-mails or to access the company-wide intranet. The RayMobile security management Dual Persona separates business data from private data. It guarantees a clear management between two independent end-user environments. High productivity and a flawless use of smartphones and tablets are promised by RayMobile.

GPS Information and Alert

Manage your applications on mobile devices with RayMobile

Feature Highlights

Meaningful Reports and Analysis

RayMobile offers meaningful report and alert options which can be extended on request.

Multi-client Capable Architecture

Users can easily manage several customers with different domains from one installation.

GPS information and Alert

GPS information and Alert give an exact documentation of the different whereabouts, provide a very high level of security in case of the loss of a device, and protect confidential company data.

Intuitive Console

Customers are able to use the software by the intuitive operable management console to manage any devices centrally. The user interface offers the user/operator an extremely interactive platform to handle the Mobile Device Management.

In-house and cloud based Mobile Management Solution

To configure and manage any smartphone or tablet, RayMobile offers an EMM server which allows an in-house or cloud based access.
