RAYSUITE® APPLIANCE

Enterprise Application Lifecycle Management Suite

Professional Software Management for Small and Medium Business

Small to medium businesses (SMBs) wish for a professional software management system, but often shy away because of the high costs associated with it.

Just like large enterprises, SMBs need a safe and reliable way to manage and update their applications and operating systems. They also need to relieve their IT resources. Ideally, these businesses should not have to manually deal with their software management and their tools should be able to support the entire lifecycle of an application.

And like so many other enterprises, those businesses do not want to have to spend a fortune on consulting services at implementation or whenever an upgrade of the software management tool is required.

SMBs want to be able to keep their existing infrastructure and at the same time possess a software management system that can grow with their company.

RaySuite Appliance is the perfect solution for small to medium businesses because it can do all of this and much more; it is a system encompassing the entire "Enterprise Application Lifecycle Management" for small budgets. As an appliance, managed service or as a cloud solution.

RaySuite Appliance is a pre-configured and pre-installed set of software components which are perfectly harmonized in a unique intuitive workflow allowing an easy and affordable use of the comprehensive RaySuite solution including RayManageSofti, a product originally designed for enterprise customers. Now, SMB customers can also enjoy numerous functions that facilitate the operation of their own IT infrastructure and allow it to be conveniently and reliably administrated. On the one hand, RaySuite Appliance will contain RaySuite functionality according to your needs and on the other hand it will contain pre-installed databases and setups for belonging data, certainly in parts customer specific and to be filled, e.g. consisting of

- Black Box Active directory
- SQL Server Express with Database Management System and Reporting functions
- Software Repository for the storage of packaged software.

RAYFLOW®

Best Practice Software Packaging Workflow

- Web-based workflow system with a unique platform to support IT departments in their software packaging projects
- Provides real time information and progress monitoring of all tasks in the software packaging lifecycle
- Flexible mail notification of work status, changes, and visual alert elements
- SLA management with detailed reports
- Web-based and client version available

RAYVENTORY®

Discovery and Inventory

- Discovery of computer devices, VMware hosts & Oracle database instances
- Agent-based inventory allows inventory of desktops and servers
- RayVentory2go with USB pen drive – enables the discovery of unmanaged or unconnected devices
- Also available as an powerful add-on for FlexNet Manager Platform and RayManageSoft customers

RAYEVAL®

Software-Evaluation

- Quick and easy execution of a professional evaluation & test documentation
- Automatic capture of the installation routines, including screenshots & description texts
- Evaluation project can be easily exported (e.g. Office Word)
- High level of customization (plugin-based, reporting, custom templates and project properties, etc.)
- Assessment of whether all relevant package information is complete

For SMB customers, this offer comes with a bundle of benefits, in saving costs as well as in obtaining a scalable solution. The following is a detailed list of what advantages this solution has to offer:

Comprising

- RaySuite Appliance provides a complete set of software solutions for workflow management, hardware discovery & software inventory, software evaluation, software packaging & virtualization, quality assurance and software deployment including patch management and OS deployment
- The deployment agent supports a variety of operating systems and various versions, such as Windows, MAC, OSX and Linux
- A customer can choose to use decentralized distribution hierarchy and virtualization, allowing to continue even if main service fails if option got chosen
- Automated discovery allows an easy rollout for clients

Scalable

- RaySuite Appliance will be integrated into your existing IT infrastructure, even in a virtual one
- If an enterprise needs to grow, a full-service SQL server can easily be upgraded
- The solution supports a large number of distribution nodes

User-friendly

- A pre-configured application for different expertise levels (users, administrators)
- An integration into your existing infrastructure, like Active Directory (AD), SQL or its capability to run insulated from existing IT infrastructure if needed. In other words, you can decide to use the AD of your infrastructure or not
- Easy, straightforward updating by a simple replacement of the application part in question
- Discrete set of applications running on "one separate box" (as an appliance) without interfering established IT processes

Affordable

- The only required components a possible customer might have to purchase is the Microsoft 2012 Standard Server; one license per processor – Microsoft SQL Server 2012 Express is free of charge
- There are just a handful of software-requirements necessary, and the installation of RaySuite Appliance will be done in a plug & play approach

Benefits

- Complete set of software solutions
 - Workflow management
 - Discovery and inventory
 - Software evaluation
 - Software packaging and virtualization
 - Quality assurance
 - Software deployment and patch management
- Less installation support and consulting
- Low license costs (SQL Express, Server Standard) required
- Direct access to the package store: Ready-made software packages - analyzed, quality-assured and deployable
- Discrete set of applications running in "one separate box"
- Minimal training effort
- Short-term provision
- Processing of Upgrades within very short time possible
- Scalable with growing requirements
- Available as an appliance, managed service or as a cloud solution

Best-of-breed Software Packaging

- Reliable snapshot-based machine capture before and after installation of an application
- Generation of classic (e.g. MSI, MST, MSP) and virtual package formats (e.g. App-V, ThinApp, XenApp & SWV)
- Support for third-party projects and Universal Apps (APPX)
- Creation of non-Windows projects (macOS)
- Integration with Package Store

Software Packaging Quality Control

- Rule-based tool used to create and execute software package test criteria in easy to make checklists
- Allows the creation of your own test criteria for each individual quality control phase in the software packaging lifecycle
- Automates part of the test routines (Runbook) through the integration of your own or Raynet's developed automated test scripts

Software Deployment and Patch Management

- Automatically and centrally deploys OS and software applications
- Proactive patch management and monitoring of patch releases
- Offers full control with roll-out waves, giving administrators the opportunity to immediately react on unplanned events
- Desired state (self-healing) and task-based Deployment
