Portfolio analysis and **optimization** for hardware and software

Data management is becoming even more important nowadays. Due to the digitilization of business processes, the increasing demands on corporate IT departments and a variety of hardware and software applications, the IT infrastructure of a company is subject to a constant growth.

Experience has shown that the complexity of the entire IT infrastructure, the associated effort for those responsible and the resulting costs have increased for companies. Therefore, it is helpful to support the internal IT department with these requirements. With our unique portfolio analysis and optimization, we offer companies the perfect solution for creating more transparency in a complex IT landscape and subsequently, highlighting unnecessary cost drivers.

Hardware Discovery

Software Inventory

Software Recognition

Software Rationalization

Hardware Discovery

Gain a comprehensive view of your IT landscape

By detecting all IP devices in the network, a high level of transparency is achieved, which offers a holistic view of the IT infrastructure. This device list serves as a prerequisite for a complete software inventory.
Your benefits:

- **Transparency** regarding actually active devices
- **Holistic view** of the infrastructure for portfolio optimization and the prerequisite for a complete inventory.

Powered by **RayVentory**.

Hardware Discovery

Software Inventory

Receive an up-to-date overview of your software assets

By using the so-called „Zero Touch Technology" or an agent, a comprehensive software scan is done, which not only achieves a high inventory rate but also a high data quality. This data serves as an information source for further systems such as CMDB, software asset management solutions, etc. and for software recognition. The list of the software raw inventory contains the number of all installations as well as the versions.

Your benefits:

- Fast and reliable collection of inventory data through various inventory methods (zero touch, remote, portable, agent based)
- Information source for **further systems** (CMDB, SAM, etc.)
- Basis for software recognition
- Software Metering – Analysis of software usage

Powered by **RayVentory**.

Software Inventory

Software Recognition

Automatic recognition, normalization and categorization of your software

Software recognition consists of the assignment of inventoried raw software data to applications. The comprehensive software recognition reporting includes detailed information on all recognized software products including the number of installations. The report not only shows vulnerabilities and risks, but at the same time also shows optimization potential, as it includes, for example, installation diversity and identical core functionality.

Your benefits:

- Basis for software rationalization
- Detection of malware, vulnerabilities, risks & security gaps
- Advanced software information, such as business function, release and EOL data, license classification and CVE vulnerabilities
- Optimization potential (installation diversity, identical core functions, etc.)

Powered by **RayVentory Catalog**.

Software Recognition

Software Rationalization

Software Rationalization

Optimize your portfolio without any losses

We will give you a concrete recommendation for action with regard to cleaning up the software landscape, while taking into account the software strategy.
This includes not only the demonstration of version diversity, but also a detailed description of the software alternatives, considering critical and economic aspects. This results in an understandable rationalization, which makes redundant software versions, languages and functions visible at a glance.

Your benefits:

- Reduction of software license costs
- Reduction of operating costs due to consolidation of version diversity
- Reduce software deployment costs for migrations
- Basis for the definition of your standard shopping cart

About Raynet GmbH

Raynet GmbH is a leading and innovative service and solution provider in information technology and specialized in the architecture, implementation, and operation of all tasks within Enterprise Application Lifecycle Management. Raynet's headquarters is in Paderborn, Germany and has additional locations throughout the region as well as locations in the USA, Poland, and the UK.

For more than 20 years, Raynet supports hundreds of customers and partners with its products and solutions for enterprise application management projects worldwide. These include license management, software packaging, software deployment, managed services, migrations, client engineering, and much more. Additionally, Raynet maintains and cultivates strong partnerships with leading companies in this area.

Raynet products and solutions are unique in design and functionality. Their development is highly driven by our customers and partners who play a big role in the development of our products and are a key reason why our products are always cutting edge. Whether you want to introduce a new deployment tool or to start a SAM project, whether you want to plan a packaging factory or do a migration – Raynet is the choice for best-of-breed-practices in services, products, and solutions for Application Lifecycle Management.
