

Yes, we scan: Oracle Java

Commercial use has been subject to a charge since April 16th, 2019. What exactly does this mean for companies?

So far Oracle Java and all updates could be obtained free of charge. Future commercial use is only possible with a paid subscription. Existing installations can also only be updated with a valid license. Who remains on old versions is unprotected against possible security gaps due to missing security patches.

Now many questions arise for companies:

- Which Oracle Java versions are in use and where are they installed?
- Is Oracle Java used at all and by whom?
- Can you do without support and hotfixes?

With our inventory solution RayVentry, any hardware and software can be flexibly inventoried in any complex or separate networks. The results from the inventory serve as a basis for developing qualified license strategies and making decisions.

Using extensive and proven methods, RayVentry recognizes ...

- ... the installation of Oracle Java (JRE/SDK)
- ... the use of Oracle Java (JRE/SDK)
- ... the parameters required for licensing

The software portfolio can be optimized by a subsequent evaluation and, if necessary, rationalization in such a way that resources and license costs are saved.
