

Raynet Unified Data Platform

Your focus is a stable, secure, value-driven IT environment. **Our vision** is complete visibility for data-driven strategy and insights.

Discover how Raynet can boost your IT security

Cyber Security Asset Management

// Cyber Attack Surface Analysis

Identify the secured position of each of your IT Assets

With the number of tools needed to create an effective secured position of your assets is increasing, the ability to ensure policy is enforced across your IT estate has become the new challenge to be managed by Security Operations.

Our Unified Data Platform identifies gaps in existing coverage to identify unprotected endpoints allowing you to take action to resolve these coverage gaps.

Discover to Manage

Cyber Security Asset Management

// Vulnerability Management

Secure your key business investments

Without regular support and updates, your software and infrastructure can be exposed to critical security and functionality gaps, leading to downtimes, delays, and loss of revenue.

Our data platform uncovers outdated and unsupported software and continuously monitors the support and lifecycle status of other applications, allowing organizations to protect IT infrastructure and ensure business continuity.

Cyber Security Asset Management

// IT Lifecycle Management

Keep your critical business IT running

Without regular support and updates, your software and infrastructure can be exposed to critical security and functionality gaps, leading to downtimes, delays, and loss of revenue.

Our data platform uncovers outdated and unsupported software and continuously monitors the support and lifecycle status of other applications, allowing organizations to protect IT infrastructure and ensure business continuity.

IT Visibility & Data Transformation

// Inventory Collection and Aggregation

Get a complete overview of your IT landscape

Complex hybrid environments, bring-your-own-devices, and decentralized purchasing and provisioning of cloud-based solutions, make it increasingly difficult for companies to maintain visibility into their IT estate.

Create a consolidated map of the current state of your environment by aggregating data from your existing sources or supplementing with Raynet Discovery and Inventory technology.

Get the transparency you need for a successful foundation of a continuous ITAM strategy.

IT Visibility & Data Transformation

// Data Enrichment & Normalization

Better data for strategic business decisions

Without a clear understanding of the data, organizations miss opportunities to gain valuable business insights and to identify threats to stability and revenue. Data normalization is key to ensuring full and reliable transparency.

Built on modern AI technology, our platform provides high quality enriched data that supports the Strategic IT decision making process by creating a trustworthy overview of IT Hardware and Software Inventory.

IT Visibility & Data Transformation

// Application Rationalization

Reduce software sprawl while maintaining functionality

With portfolio analysis and optimization, companies can achieve higher transparency of their complex IT infrastructures and control rising software costs.

Our Unified Data Platform can identify the applications in your environment and evaluate the costs and benefits of each application in real time. With Application Rationalization, your IT infrastructure becomes more responsive, adaptable and scalable.
